

ACL500 Accessible Toilet Lockset.

The new ACL500 lockset from Morgan has many unique design features to offer ease of installation and user friendly functionality. The lock body incorporates a simplified internal mechanism to ensure a smooth and light pressure operation by any existing National Key Scheme (NKS) key. Furthermore the key can be turned in either direction to withdraw the latch providing added assistance to less dexterous users.

Whilst other NKS locksets require handed furniture to be fitted the Morgan lockset furniture is suitable for both right and left handed doors as standard. Simply set the lever handle to the required position during installation for a quick and easy fit.

Lock Case

Standard sized lock case for new installation or retro fit.
Stainless steel faceplate.
Quick reverse latch bolt to suit door handing.
Stainless steel striker plate.

Furniture

Stainless steel construction.
19mm return to door safety lever handle.
Universal fit - No handing requirements.
Bolt through fixings with anti tamper external heads.
External status indicator and emergency release.

Operation

The lock is opened from outside by NKS key turned in either direction.
From the inside the lever handle is pushed **up** to lock the door. This shows red on the external status indicator and prevents key operation from the outside although emergency access is available via the coin release.
Pushing the internal lever handle down unlocks and opens the door for exit.
Once the door is closed again it will automatically lock.

Each lockset includes lock case, furniture, striker plate,
all fixing screws and bolts, installation key and fitting instructions.
